

Planning

1. Research on ransomware working and software level execution of ransomware including examining codes of few ransomware —> Research.pdf
2. Research on existing ransomware detection services, tools used by softwares to detect, what to detect and how to detect —> Detection Research.pdf
3. Designing the detection software, how will the created software detect.
4. Designing Detection Rules and when to trigger an alert of ransomware
5. System Architecture
6. Vibe coding the model using prompt engineering
7. Test cases using ransomware on virtual machine with the detection service, then running tests to see the efficiency
8. Documentations.
